Pediatric hospital bed h919_35

Pediatric hospital bed in epoxy steel, 160×60 cm, 100 kg capacity, adjustable backrest and thigh section, for pediatric clinics and departments.

The **pediatric bed** is a solution dedicated to the pediatric departments of clinics and hospitals, designed to ensure comfort and safety for the youngest patients. The **rectangular steel tubing** structure with an epoxy finish ensures robustness and ease of sanitization, essential features in a healthcare environment.

The bed allows for articulated adjustments of the backrest section and the thigh section, adapting to different postural needs during hospitalization. Although it does not have Trendelenburg and Reverse Trendelenburg movement, it maintains functional versatility for standard pediatric clinical needs.
