

Physiotherapy mat in bonded foam h581_57

Professional mat 200x100x5 cm in high-density bonded foam, fire-retardant anti-mold coating and non-slip bottom for rehabilitation and sports.

The **professional mat for rehabilitation and gymnastics** is designed to meet the specific needs of physiotherapy centers, gyms, and healthcare facilities. The internal structure in **high-density bonded foam (80 kg/m³)** provides stable and secure support, distributing the load evenly during floor exercises and preventing direct contact with the ground. The outer coating integrates **anti-mold and antibacterial** treatments, essential for intensive use in collective environments, while the non-slip bottom ensures maximum stability during every movement.

Technical characteristics

- Dimensions: 200 x 100 x 5 cm
- Internal density: 80 kg/m³
- Core material: high load-bearing compact bonded foam
- Coating material: anti-mold and antibacterial technical fabric
- Certification: Class 2 fire-retardant
- Safety: integrated non-slip bottom
- Hygiene: removable cover and washable
- Transport: equipped with handles for movement
- Color: blue
