

Physiotherapy mat in foam and imitation leather h. 5 cm h731_74

Medical rehabilitation mat in graduated density foam (200x200x5 cm). Removable and washable fire-retardant imitation leather cover.

This professional mat is specifically designed for **medical rehabilitative gymnastics** and motor therapy. The internal structure in **graduated density foam (21 kg/m³)** ensures ergonomic support that balances comfort and stability during exercise execution. The **fabric-backed imitation leather** upholstery with a glossy finish not only guarantees long-lasting durability but also facilitates routine maintenance thanks to the waterproof surface and ease of cover removal.

Operational safety is increased by **rounded edges** and side padding, which minimize the risk of impact, making the mat suitable for patients with various motor abilities. The **fire-retardant** nature of the materials makes it a safe component for integration into healthcare and professional settings subject to fire regulations.
