

Plastic pedestrian barrier h661_02

Plastic road barrier. Dimensions: W.193xD.44.6xH.100 cm

High-density polyethylene barrier, versatile and suitable for various safety situations on temporary construction sites, for delimiting pedestrian passage, traffic control, or pedestrian management during events. Durable and robust, the barrier is supplied **complete with feet**, which make it stable even on irregular ground. Wear-resistant, equipped with an integrated **male-female connection system**, which allows for quick **modular** coupling between multiple elements without the need for additional accessories. With **red and white reflective tape** for increased visibility, they are available in various colors.

Technical features:

- Material: polyethylene
- With feet
- Red and white reflective tape
- Modular
- Dimensions: W.193xD.44.6xH.100 cm
- Available in various colors
