

Plastic road barrier h661_01

Plastic road barrier. Dimensions: W.110xD.40xH.100 cm.

High-density polyethylene barrier, versatile and suitable for resolving various safety situations in **temporary construction sites**, to delimit pedestrian walkways, traffic control, or pedestrian flow during events. Durable and robust, the barrier is supplied complete with **feet**, which make it stable even on uneven ground. **Wear-resistant**, equipped with an integrated male-female connection system, which makes quick **modular** coupling between multiple elements possible without the need for additional accessories. With **red and white reflective** tape for greater visibility, they are available in various colors.

Technical features:

- Material: polyethylene
- With feet
- Red and white reflective tape
- Modular
- Dimensions: W.110xD.40xH.100 cm
- Available in various colors
