

Plate trolley for professional use h2200103

Plate trolley in AISI 304 stainless steel, with 4 swivel wheels and anti-tip base, ideal for restaurants and catering.

The plate trolley is a practical and robust solution for transporting plates and dishes in high-flow catering environments. Designed for restaurants, canteens, catering services, and hotel dining rooms, it allows you to safely manage the movement of dishes between the kitchen and dining room with efficiency and stability.

The structure is made entirely of **AISI 304 stainless steel**: walls, shelf, and square structural tube (2x2 cm). This choice of material guarantees resistance to corrosion, ease of sanitization, and long durability even in humid environments subjected to frequent washing.

The **plate support base is inclined** to prevent accidental tipping during transport. The **four swivel wheels** (diameter 12.5 cm) of which **2 are equipped with brakes** guarantee maneuverability and safe stopping on any surface.

Technical characteristics

- Material: AISI 304 stainless steel
- Supporting structure: 2x2 cm square stainless steel tube
- Plate support base: inclined, anti-tip system
- Swivel wheels: 4 units, Ø 12.5 cm (2 with brakes)
- Dimensions: 90 × 60 × h91 cm

Optional

- 2 removable stainless steel separation grids
