

Playground slide h350_336

Professional galvanized steel and HDPE slide for public parks. EN 1176 certified, UV resistant, ideal for children aged 2 to 8. The professional **children's slide** is designed for installation in high-traffic open spaces, such as public playgrounds, playrooms, and municipal gardens. The structure is engineered to guarantee maximum mechanical resistance and durability over time thanks to the use of **electro-galvanized steel** and HDPE polyethylene panels, materials chosen for their resilience against atmospheric agents and solar radiation.

Safety is the core element of the construction: the panels are free of sharp edges and all bolts are made of 8.8 galvanized steel with self-locking nuts to prevent structural loosening. The integration of pantographed panels also allows for a small climbing activity, enriching the play experience.

Technical specifications

- **Total dimensions:** L. 170 x D. 168 x h. 205 cm
- **Frame material:** Electro-galvanized and painted steel with Ø 60 mm tubular frames
- **Panels:** HDPE polyethylene pantographed and shaped for climbing
- **Slide:** Mass-colored rotational polyethylene, height 98 cm, track length 195 cm
- **Age of use:** 2-8 years
- **Capacity:** 2 people
- **Impact area:** 20 m²
- **Fall height (HIC):** 98 cm
- **Minimum required space:** 480 x 475 cm
- **Fixing:** Designed for underground anchoring
- **Estimated assembly time:** 2 hours
- **Hardware:** 8.8 galvanized steel bolts and self-locking nuts
- **Certification:** Compliant with EN 1176 Standards
