

## Playground slide h521\_42

Steel and HPL playground slide, dimensions 236x76x168 cm. Durable structure for soft ground and anti-corrosion components. This **playground slide** is designed for installation in professional play areas, ensuring a safe and durable user experience for children. The structure consists of two main modules: an access ladder and the sliding surface. The solidity of the entire apparatus is ensured by the use of **steel tube** treated to resist atmospheric agents and side panels in **HPL** (High Pressure Laminate), a material known for its high mechanical resistance and color stability over time.

## Technical features

- Overall dimensions: L. 236 x D. 76 x H. 168 cm
- Slide structure: high-resistance metal
- Ladder material: steel tube with protective zinc primer finish
- Side panels: HPL laminate
- Hardware: stainless steel screws with protection system via colored HDPE caps
- Intended use: installation on soft ground
- Recommended age of use: from 3 years old
- Certification: compliant with current playground safety regulations
