

Polished white concrete fountain h287_329

Circular fountain in vibrated reinforced concrete Ø 50 cm. Polished white finish with anti-degradation water-repellent treatment for outdoors.

Designed for placement in public parks, historic villas, and private green areas, this **circular fountain** combines structural solidity with a refined aesthetic. The structure is made of **vibrated reinforced concrete with continuous molding**, a production technique that ensures superior material density and prolonged resistance to mechanical and environmental stress.

The surface undergoes a **polishing** process that uniformes its texture, facilitating the removal of organic deposits and dust. The protection of the product is entrusted to a specific **anti-degradation water-repellent treatment**, which acts in depth preventing moisture penetration and protecting the concrete from freeze-thaw cycles and the action of UV rays, keeping the natural effect of the finish unaltered.

Technical characteristics

- **External dimensions:** Ø 50 x h. 90 cm
- **Weight:** 190 kg
- **Material:** vibrated reinforced concrete with continuous molding
- **Standard finish:** polished white
- **Geometry:** circular shape
- **Treatment:** anti-degradation water-repellent paint with natural effect
- **Equipment:** drinking spout not included in the supply

Options and customizations

- Available in different finishes upon request and subject to quotation.
