

Polyethylene patient transfer roller h664_02

Foldable polyethylene rollbord for patient mobilization. Max resistance: 300 kg. Dimensions: 180 x 50 cm.

The **patient transfer board** is a fundamental product for those healthcare sectors dealing with patients with **mobility difficulties** or **severe pathologies** that prevent autonomous walking. The transfer board is made of **polyethylene** and **features a surface without trailing edges, thus ensuring maximum hygienic safety**. The product is characterized by an **extremely resistant structure** that can support up to **300 kg**, making it ideal for obese patients. The sheet does not feature magnetic pieces, screws, or plastic parts so as not to create impediments to the mobilization of patients. It is possible to clean the surface of the transfer board with all common disinfectants.

Technical features:

- Material: polyethylene
- Without hinges
- Ideal for obese patients
- Max resistance: 300 kg
- Dimensions: 180 x 50 cm
- Foldable

INFORMATION

- **length** 180 cm
- **Width** 50 cm
- **capacity** 300 kg
