

Portable hot air generator 2 kW h958_24

2 kW single-phase electric fan heater for surfaces up to 20 m². Compact IPX4 splash-resistant structure, ideal for workshops and construction sites.

The **H958_24 portable hot air generator** is a professional electric fan heater designed for localized heating of small industrial and commercial environments. Thanks to its **maximum power of 2 kW** and robust design, it represents the ideal solution for those who need an immediate, safe, and easily transportable heat source in dynamic operational contexts.

The device integrates intelligent energy management through three selectable power levels, allowing to switch from simple summer ventilation to intensive heating. Compliance with the **IPX4** standard ensures full operation even in the presence of humidity or water splashes, extending its use to construction sites and technically demanding work areas.

Technical features

- **Maximum power:** 2 kW
- **Power supply:** Single-phase (domestic and light industrial standard)
- **Adjustable power levels:** 25 W (ventilation), 1000 W and 2000 W
- **Airflow:** 260 m³/h
- **Maximum heated area:** 20 m²
- **Integrated thermostat:** Adjustable up to 85°C
- **Fan:** Diameter 170 mm
- **Protection degree:** IPX4 (splash water resistance)
- **Dimensions:** 23.5 x 22.5 x 33 cm
- **Net weight:** 3.5 kg
- **Color:** High-visibility yellow
- **Recommended operating ambient temperature:** 15 - 25°C
