

Professional boot washer h14227

Professional boot washer in AISI 304 stainless steel (760x640x1220 mm). Wet cleaning of soles and uppers with rotating brush and EasyClean function.

The **professional boot washer h14227** is a compact station designed for wet cleaning of clogs, work shoes, and boots. Made entirely of durable AISI 304 stainless steel, this machine combines several essential functions to tackle heavily soiled soles in demanding operational contexts. Dirt removal on the upper is facilitated by the EasyClean function, which utilizes a practical cleaning opening located under the roller brush. Boot legs and plastic protective trousers can instead be effectively sanitized using the integrated manual brush, equipped with an individually adjustable water flow. The system also allows for an increased level of hygiene by automatically mixing detergents or disinfectants: the amount of chemical product is controlled via a dedicated supply hose, while the container finds a secure housing on the specific stable platform integrated into the structure.

Technical features

- **Construction material:** V2A 1.4301 (X5CrNi18-10) stainless steel, AISI 304
- **Overall dimensions (W x D x H):** 760 x 640 x 1220 mm
- **Total weight:** 50 kg
- **Brush configuration:** 1 horizontal brush in durable nylon (for sole and upper part) and integrated manual brush
- **Recommended water pressure:** 3 bar
- **Water operating temperature:** From 5 to 50 °C
- **Nominal water flow:** 4 l/min (with adjustable delivery on manual brush)
- **Power supply and motor:** 400 volt electrical connection, 180 watt, 50 Hz
- **System management:** Control cabinet designed for wall mounting
- **Electrical protection class:** IP 55
- **Sanitization integration:** Provision for disinfectant/detergent dispensing with suction hose and support platform
- **Maintenance and cleaning:** EasyClean function for quick machine access and cleaning
