

Professional boot washer with 3 water-fed brushes h767_01

Professional manual boot washer in painted steel, 400x400 mm. Water-powered operation without electricity with 3 integrated water-fed brushes.

The **professional water-fed boot washer** is a mechanical solution designed for the deep cleaning of technical footwear in heavy-duty operational contexts. Thanks to the **welded steel** structure and surface treatment with **epoxy powders**, the equipment guarantees high resistance to corrosion and wear. The system effectively solves the need for sanitization in areas without an electrical connection, utilizing exclusively the pressure from the water mains to operate the water-fed brushes and remove mud, debris, and organic contaminants through the mechanical movement of the boot.

Technical features

- **Dimensions:** W 400 x D 400 mm
- **Adjustable height:** from 500 mm (handle lowered) to 870 mm (handle raised)
- **Weight:** 10 kg
- **Material:** welded steel with epoxy powder finish
- **Washing system:** 1 single water-fed brush and 2 side water-fed brushes
- **Power supply:** water (mains connection)
- **Components:** integrated by-pass valve
- **Operational safety:** operation without electricity
