

## Professional rehabilitation ergometer h731\_93

Professional ergometer for advanced rehabilitation with magnetic induction braking system, 16 kg flywheel mass, customized programs and advanced heart rate monitoring. Dimensions: W 96 x D 56 x H 143 cm.

The **H731\_93 ergometer** is a professional tool designed for intensive training and rehabilitation programs, offering maximum precision and customization. Thanks to the **magnetic induction braking system** and the **16 kg flywheel mass**, it guarantees smooth, silent and highly resistant pedaling, ideal for healthcare facilities and advanced fitness centers.

The **integrated training computer** allows you to view numerous parameters, such as **speed, calories, time, distance, heart rate, RPM and watts**, ensuring total control during physical activity. There are **12 preset programs** available, as well as functions such as **Recovery, Race, 4 custom users, 4 HRC, 1 Watt and bodyfat test**, to adapt the training to each user's specific needs.

**Cardio detection** occurs via **hand pulse sensors and an integrated wireless receiver**, ensuring a precise and constant measurement of the heart rate. The **vertically and horizontally adjustable saddle** ensures an ergonomic and comfortable position for users of different heights.

The **transport wheels** simplify the movement and positioning of the equipment, while the **EN957 - 5 SB certification** confirms compliance with European standards in terms of safety and quality.

**Discover the quality and innovation of the H731\_93 professional rehabilitation cycle ergometer!  
Order now or contact us for further information.**

### Technical characteristics:

- **Braking system:** Magnetic induction
- **Flywheel mass:** 16 kg
- **Transmission ratio:** 1:32
- **Programs:** 1 manual, 12 preset, Recovery, Race, 4 user, 4 HRC, 1 Watt, bodyfat test
- **Saddle adjustment:** Vertical and horizontal
- **Cardio detection:** Hand pulse, integrated wireless receiver
- **Transport wheels:** Yes
- **Dimensions:** W 96 x D 56 x H 143 cm
- **Weight:** 52 kg

- **Maximum capacity:** 160 kg
- **Certification:** EN957 - 5 SB
- **Power supply:** 240 VAC - 50 Hz

## User benefits:

- **Advanced and customized programs:** to adapt to every need.
- **Complete monitoring of training parameters:** for total performance control.
- **Silent and precise braking system:** thanks to magnetic induction.
- **Ergonomic saddle adjustment:** ideal for users of different builds.
- **Safety certification:** according to European standards.

## FAQ:

1. **What parameters does the display show?**  
The display shows speed, calories, time, distance, heart rate, RPM and watts.
2. **Is it possible to customize the training programs?**  
Yes, the ergometer offers 4 custom programs for different users and numerous preset programs.
3. **Is the braking system silent?**  
Yes, the magnetic induction system ensures a smooth and silent pedaling.
4. **How is the pulse measurement performed?**  
The measurement of the pulse occurs through hand sensors or an integrated wireless receiver.
5. **What is the maximum weight capacity of the device?**  
The maximum capacity is 160 kg.

## Mini buying guide:

The **H731\_93 cycle ergometer** is the ideal choice for those looking for a professional and versatile tool for **customized training and advanced rehabilitation programs**. The **saddle adjustment, precise cardio measurement** and **numerous preset programs** make it perfect for adapting to users with different needs.

If you want a reliable, certified and safe tool, the H731\_93 represents a complete solution for **rehabilitation and targeted training** in fitness centers and medical facilities.

Professional ergometer, rehabilitation cycle ergometer, H731\_93, advanced training, cardio training, bodyfat test.
