

Psychomotricity obstacle tunnel h999_29

Psychomotricity tunnel obstacle for 18-36 months in polyurethane foam and PVC. Dimensions 60x30x55 cm. Modular, antibacterial and certified for nurseries.

The **psychomotricity tunnel obstacle** is a professional educational module designed specifically for the **18-36 months** age group. Ideal for nurseries, preschools and multipurpose centers, this element solves the need for safe equipment that stimulates autonomous exploration. The structure invites the child to crawl, climb or pass under the module, promoting the development of body awareness in a protected environment.

Technical features

- **Intended use:** Psychomotricity for children from 18 to 36 months
- **Internal core:** Polyurethane foam with 25 kg/m³ density for optimal support
- **Outer covering:** High resistance polyester PVC, phthalate-free
- **Surface properties:** Antibacterial, non-slip and anti-bite finish
- **Dimensions:** W. 60 x D. 30 x H. 55 cm
- **Joining system:** Integrated hook-and-loop fasteners for modular configurations
- **Compliance:** Product complying with European safety and child protection regulations
