

Radiotransparent transfer system h664_09

Foldable Rollbord with Teflon sliding fabric. Radiotransparent and easy to clean. Max capacity: 200 kg.

The transfer board for disabled people is an essential product for bedridden patients and people with motor difficulties who therefore need help to be **transferred from one surface to another** safely and easily. The **foldable transfer roll** features a structure formed by an internal core in a special **lightweight foam**, while the outer part is coated in **silver-colored Teflon**.

The transfer sheet features **removable and interchangeable end strips** and plastic exit edges with a ring. The product undergoes an **antibacterial treatment** to ensure hygiene and cleanliness and can be easily disinfected.

Technical features:

- Material: internal lightweight foam, Teflon sliding coating
- Coating color: silver
- Max capacity: 200 kg
- Radiotransparent
- Foldable
- Dimensions: 180 x 50 cm

The radiotransparent transfer system h654_09 is also available on the MEPA portal. Discover how to find our company on the [Public Administration portal](#).
