Double-sided bike rack with concrete supports h19110

Double-sided bike rack with concrete supports and galvanized steel structure. Min. dimensions 2340x550x400 mm. From 10, 12 or 14 bike spaces.

The **double-sided bike rack with concrete supports** is a removable solution designed for high-density urban furniture. Characterized by a **galvanized and powder-coated steel** structure in micaceous grey, this rack solves the problem of untidy bicycle parking in public and private contexts. Thanks to its double-sided configuration, it optimizes available space by allowing access from both sides, making it ideal for **municipal administrations, shopping centers, and residential complexes**. The integration between high-resistance concrete conglomerate and treated metal guarantees self-supporting stability that does not require floor fixing, facilitating the management of dynamic urban spaces.

Technical characteristics

- **Dimensions:** variable according to the number of spaces (2340/2740/3140 x 550 x 400 mm).
- **Capacity:** available in 10, 12 or 14 bike space variants.
- **Structure material:** galvanized and powder-coated steel (micaceous grey finish).
- **Side supports:** high-resistance concrete conglomerate (R42.5) with internal steel reinforcement.
- **Support finish:** marble grit available in Bianco Carrara, Occhialino or Rosso Verona.
- **Wheel holder system:** triangular-shaped brackets positioned in groups of four.
- **Installation:** removable, does not require excavation or permanent anchoring.
- **Operating weight:** 159, 164, 170 kg based on the chosen configuration.
- **Assembly:** supplied with rack to be assembled and fixed with the provided screws to the side elements.

* Image for illustrative purposes only (the structure is micaceous grey)

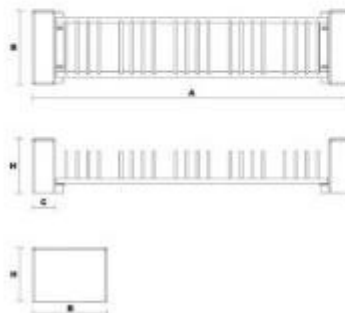

INFORMATION

- **Material** Steel
- **strengths** amovibili con base in cemento, bi-facciali
- **Typology** al suolo
- **fixing** removable
- **Color** grigio micaceo
