

Rectangular outdoor fountain h109_283

Outdoor fountain made of rectangular steel tubing, galvanized and painted, with a push-button tap and cast iron drain. Dimensions 250×640×1003 mm.

The outdoor fountain is a robust and durable solution for public spaces, parks, and common areas. Made with a **rectangular steel tubing** structure, it guarantees stability and resistance over time. The product integrates all the elements necessary for autonomous operation: a **front push-button tap with return spring** that remains in the closed position, a **painted cast iron drain** with a removable grate to facilitate maintenance, and a **base with a welded square plate** designed for secure ground fixing using expansion bolts.

Corrosion protection is ensured by **galvanizing and painting with thermosetting polyester powders** applied to all metal parts, making the fountain suitable even for coastal environments or critical weather conditions. The **nickel-plated brass** tap is connected to stainless steel piping with a 1/2" threaded terminal, facilitating connection to the water network. The structure is completed by a **removable steel cap** at the top, accessible for installation and maintenance operations.

Technical features

- Dimensions: L. 250 × D. 640 × h. 1003 mm
- Drain depth: 450 mm
- Structure: rectangular steel tubing
- Finish: galvanizing and thermosetting polyester powder coating
- Colors: available in various versions
- Top cap: removable steel with two screws
- Base: welded square plate with 4 holes for ground anchoring
- Tap: nickel-plated brass, front push-button with return spring
- Water connection: stainless steel piping, 1/2" threaded terminal
- Drain: painted cast iron, two-piece composition (frame and removable grate)
