

## Reflective traffic cone h503\_19

PVC traffic cone, height 50 cm, with reflective strips. Durable and stackable, ideal for the delimitation of private areas and parking lots.

The **PVC traffic cone** is a signaling device designed for the temporary delimitation and highlighting of work areas, maintenance interventions, and flow management in **private, corporate areas or parking lots**. The structure is designed to effectively resist impacts and mechanical stress, maintaining functional integrity even in intense operational contexts. Thanks to the optimized conical design, the product is easily **stackable**, allowing for a drastic reduction in bulk during transport and warehouse storage.

## Technical characteristics

- **Height:** 50 cm
- **Material:** High-resistance PVC
- **Color:** High-visibility red with white strips
- **Visibility:** Equipped with reflective strips for nighttime operations or low light conditions
- **Weight:** 1.3 kg per single unit
- **Storage:** Stackable structure
- **Sales unit:** Pack of 10 pieces
