

Reinforced service trolley h22_246

Reinforced service trolley in AISI 304 stainless steel, 108x61x96h cm. Smooth shelves with reinforcement omegas and 16 cm industrial wheels.

The service trolley **h22_246** is a professional solution designed for intensive handling in environments requiring high hygiene standards and structural strength. Made entirely of **AISI 304 stainless steel** with a brushed finish, this model stands out for the solidity of the 25x25 mm square tube frame and for the stability of the loading shelves.

The construction configuration features smooth sheet metal shelves welded directly to the frame, integrating **reinforcement omegas** that prevent structural bending under load. The handling system is optimized for industrial use thanks to large-diameter wheels on bearings, ensuring smoothness even at full load.

Technical features

- **Material:** Superior grade AISI 304 stainless steel
- **Finish:** Anti-reflective brushed
- **Structure:** Welded 2.5 x 2.5 cm square tube
- **Shelves:** Smooth sheet metal with lower omega reinforcements
- **Protection:** Non-marking grey rubber perimeter bumpers
- **Rotating system:** Swivel casters on plate, Ø 16 cm on bearings
- **Safety:** 2 wheels equipped with foot brake
- **Total dimensions:** L.108 x D.61 x h.96 cm
- **Useful shelf dimensions:** 100 x 58 cm
