

Road safety barrier h28014

High-resistance protection barrier with injection molding. Equipped with adjustable feet and a central handle.

Protection barrier used to restrict access to sidewalks, roads, construction sites and to secure spaces. Solid and impact-resistant structure thanks to the **polymer and polypropylene injection molding** with central reinforcements to ensure greater stability. Equipped with a **reflective strip** so as to be visible even at night. The safety barrier can be used on any type of surface (even irregular) and **can be assembled linearly or in a square shape** through connectors and adjustable feet. Furthermore, the barrier can be easily moved thanks to the **central handle**.

Technical features:

- Material: polymer/polypropylene
- Color: red
- Central handle
- Adjustable feet
- With reflective strip
- Provision for safety lamp
- Use: indoor/outdoor
- Width 2000 x Height 1000 mm
- Weight: 14.5 Kg

INFORMATION

- **Material** plastica
- **advantages** con catarifrangente
- **warranty** 1 anno
- **Length in millimetres** 2000.000000
- **Height in millimetres** 1000.000000
