

Roll-up emergency stretcher h1046_04

Roll-up emergency stretcher h1046_04 in black HDPE. Extremely flexible medical device for confined environments. Weight: 5 kg.

The **roll-up emergency stretcher h1046_04** is a rollable medical device designed for rescue in confined spaces, developed specifically for **healthcare professionals, technical rescue teams, civil protection personnel, and industrial safety officers**. This system represents an extremely flexible device, very useful in the evacuation of injured persons in complex environmental conditions, and is particularly indicated for the evacuation of injured persons from cramped places and with narrow or complicated passages. The module solves the operational problem of **safely extracting and handling an immobilized patient by overcoming bottlenecks, tunnels, or vertical shafts that prevent the passage of traditional rigid stretchers**. The structure is manufactured in black HDPE material and is fully compliant with the standards of EU Regulation 2017/745, guaranteeing high manufacturing quality entirely produced in Italy.

Technical features

- **Type of product:** rollable medical device for rescue
- **Compliance standard:** EU REGULATION 2017/745
- **Construction material:** HDPE (High Density Polyethylene)
- **Structural mass (Weight):** 5 kg
- **Device length:** 135 cm
- **Device width:** 92 cm
- **Body color finish:** black color
- **Frame configuration:** without rigid frames
- **Logistics and manual handling:** equipped with side handles for transport with multiple operators
- **Vertical transport devices:** equipped with slings for vertical transport in shafts or tunnels
- **Maintenance and hygiene systems:** easy to clean and disinfect, with separately replaceable components
- **Included transport equipment:** bag with shoulder straps specific for storage and transport
- **Product origin:** produced in Italy
- **Technical survey reference:** file named "image_573da2.png"
