

Rubber road cone h632_12

30 cm rubber signaling cone with two reflective bands, ideal for delimiting emergency areas and temporary road construction sites.

The **30 cm signaling cone** is an essential device for safety management and rapid delimitation of spaces in critical contexts. Specifically designed to identify areas affected by accidents or to perform a temporary separation of the roadway during roadworks, this tool offers high visual effectiveness in a compact format. The choice of **rubber** as the primary material guarantees a structural mass that gives stability to the device, preventing it from tipping over or being moved by the air displacement of passing vehicles.

Technical features

- Height: 30 cm
- Material: high-density rubber
- Bands: two integrated reflective bands
- Reflectivity classification: available in Class I and Class II
- Structure: robust and impact-resistant
