

Self-loading stretcher with shortenable frame h687_53

Self-loading stretcher equipped with a length-adjustable frame. L. 1980 x D. 585 x h. 600 mm.

Ambulance stretcher designed to allow **patient transport** and its **loading and unloading from any rescue vehicle**. The **structure is light and easy to handle**, thanks to the presence of **folding legs** which, through a **curved structure**, guarantee **perfect stability** and **optimal load distribution**. The legs can be opened and closed via **color-coded controls** which, depending on the color, can determine their opening during unloading and closing during loading onto the medical vehicle. The **stretcher backrest is adjustable** and the **frame, made of yellow stainless steel, is shortenable in very little time** via a **control lever**, reducing the overall length of the stretcher by 30 cm and making it suitable also for transport in confined environments such as corridors and elevators. Equipped with **fold-down side rails (can rotate 180°)**, **foldable front trolley**, **Trendelenburg anti-shock positions**, **4 base wheels** with a diameter of 200 mm (**2 fixed and 2 swivel with brakes on the rear wheels**), **2 black restraint belts**. Product classified as a **Class I medical device** according to **Dir. 93/42/EEC** and equipped with **10G certification**.

Technical characteristics:

- Reclining frame in less than 2 seconds
- High-density polyethylene platform
- Platform color: black
- Stainless steel frame
- Frame color: yellow
- Adjustable backrest
- Color-coded controls
- Trendelenburg anti-shock positions
- Fold-down side rails
- 2 fixed wheels and 2 swivel wheels Ø 200 mm
- Brakes on the rear wheels
- Length: 1980 mm
- Depth: 585 mm
- Shortened length: 1680 mm
- Weight: 35 kg
- Capacity: 170 kg
- Height under the loading wheel: 60 cm
- Side rail length: 680 mm
- Side rail height: 200 mm
- Black restraint belts (2 pieces)
- Class I MD according to Dir. 93/42/EEC
- 10G Certification
