

Self-loading stretcher with side rails h687_26

Self-loading ambulance stretcher with polyethylene platform and steel frame. Load capacity: 170 kg.

The ambulance stretcher is a product indicated for rescue operations carried out with the aid of ambulances and involving the transport of injured and sick patients.

The self-loading stretcher features a **steel frame** with an **easily sanitizable polyethylene platform** and backrest adjustable in 5 positions in addition to the horizontal one.

The Safe bar reclining side rails allow for safe and effortless patient transfer, while the leg locking system in the closed position allows it to be lifted like a small stretcher.

Transport of the stretcher is facilitated by the presence of 2 fixed wheels and 2 swivel wheels with brakes on the rear wheels.

Technical features:

- Frame material: steel
- Polyethylene platform
- Color-coded controls
- Trendelenburg anti-shock position
- Reclining side rails
- Load capacity: 170 kg
- Length: 1980 ±10 mm
- Width: 570 ± 10 mm
- Weight: 40 ± 1 kg
- Wheels: ø200 mm
- Side rail length: 680 mm
- Side rail height: 200 mm

INFORMATION

- **Capacity 170 Kg**
