

Self-tipping container h1004_10

300-liter self-tipping container in 3 mm steel. Low profile for tight spaces, 800 kg capacity and watertight structure.

The **self-tipping container h1004_10** represents an advanced technical solution for the management, storage, and unloading of bulk materials in industrial contexts where space optimization is a priority. Thanks to its **low profile** with an external height of only 465 mm, this skip is specifically designed to be positioned under machinery, presses, or conveyor belts, solving the problem of scrap collection in operational areas with limited vertical clearance.

Built from solid **3 mm steel sheet** with a watertight structure, the container guarantees maximum mechanical resistance and safety against leaks of industrial liquids or sludge. The self-tipping emptying system allows for quick and safe operations with the aid of a forklift, eliminating the need for manual handling of the load during the unloading phase.

Technical specifications

- **Capacity:** 300 liters
- **Maximum load capacity:** 800 kg
- **Tare weight:** 70 kg
- **Material:** 3 mm steel sheet
- **Tank depth:** 300 mm
- **External dimensions:** W. 1250 x D. 800 x h. 465 mm
- **Emptying type:** Tilttable via forklift
- **Standard color:** Blue RAL 5010
- **Certification:** CE mark
- **Use:** Bulk materials, industrial waste, light liquids
- **Handling:** Integrated industrial wheels and forklift attachment
