

Self-tipping hopper 260 lt h1004_15

260L self-tipping hopper in 2mm steel. 1,000kg capacity, watertight structure and compact dimensions for solid and wet waste management.

The **260-liter self-tipping hopper** is a technical solution designed to optimize the processes of handling, storage, and controlled discharge of bulk materials. Made of **2 mm thick steel sheet**, this unit combines high structural resistance with a low tare weight, ensuring operational efficiency even in industrial environments with limited maneuvering space. The system is engineered to meet cleaning and safety needs, thanks to a **watertight structure** that allows the treatment of wet materials or liquid residues without the risk of spillage.

Technical specifications

- **Capacity:** 260 liters
- **Maximum load:** 1,000 kg
- **External dimensions:** L.1100 x D.1000 x h.635 mm
- **Body dimensions:** L.1050 x D.910 x h.490 mm
- **Empty weight:** 70 kg
- **Material:** 2 mm thick steel sheet
- **Structure:** Watertight for liquid containment
- **Handling:** Base prepared for forking with pallet trucks or forklifts
- **Discharge mechanism:** Automatic self-tipping system
- **Standard color:** Blue
- **Certifications:** CE mark

Available options:

- Closing lid
- Wheel kit for manual handling
- Hydraulic cylinder for decelerated tipping control
