

Sepiolite granules bucket h1043_52

Mineral absorber in granules based on sepiolite for universal liquids, in a 20 kg bucket (absorbing capacity 16 liters). Inert product, non-toxic, fireproof and grain size 4/30.

The **sepiolite granules bucket** (model h1043_52) is a professional remediation and safety system, specifically formulated as a granule absorber for universal liquids. Developed for use in **factories, workshops and work areas in general**, this device is aimed at safety managers (H&S Managers) and company managers who must keep the premises compliant with current protection regulations. The mineral granular solves the operational problem of **spilled liquids (such as oil, petrol, water, etc.) which, in the event of accidental spills, can cause slipping accidents, fermentation phenomena, environmental risks and unwanted odors**. Thanks to the natural properties of sepiolite, the product is a porous mineral granular, completely inert, non-toxic and non-degradable, characterized by a totally fireproof and non-combustible profile that allows safe use both inside departments and in external yards.

Technical characteristics

- **Model and type:** granule absorber for universal liquids
- **Structure and material consistency:** granular / porous mineral granular (sepiolite)
- **Nominal absorbing power per single container:** 16 liters (16 LT.)
- **Packaging and supply format:** 20 kg bucket (20 KG. BUCKET)
- **Grain size parameters:** grain size 4/30
- **Spectrum of action and compatibility:** universal, suitable for absorbing all types of liquids (oil, petrol, water, etc.)
- **Chemical-physical stability and fire behavior:** non-flammable, non-explosive, non-combustible, non-degradable, fireproof
- **Toxicological profile and origin:** inert and non-toxic product of natural origin
- **Compliance with standards and European directives:** substance not considered dangerous according to directive 1999/45/EC and European directives 91/155/EEC, 93/112/EC and 2001/58/EC
