

Service trolley 3 reinforced shelves h09_270

Professional AISI 304 stainless steel service trolley with 3 reinforced shelves (80x60 cm). Tubular structure for heavy loads up to 200 kg.

The service trolley **h09_270** is a professional equipment designed for intensive handling and transport of heavy loads in environments requiring high hygienic standards and mechanical strength. Entirely made of **AISI 304 stainless steel**, the trolley stands out for its extremely solid 25x25 mm tubular structure, capable of withstanding constant stress in industrial or catering contexts.

The distinctive element of this model is the integration of **reinforcement omegas** under each of the three shelves: this technical solution prevents bending of the sheet metal and ensures superior stability during transit, even at full load. Maneuverability is ensured by four large-diameter multidirectional wheels, while the protection of furniture and walls is guaranteed by rubber corner bumpers.

Technical features

- **Material:** AISI 304 stainless steel with professional finish
- **Shelves:** 3 shelves in AISI 304 stainless steel with perimeter folding and omega reinforcement
- **Shelves dimensions:** 80 x 60 cm
- **Structure:** 25x25 mm square tubular frame
- **Movement system:** 4 multidirectional wheels Ø 125 mm
- **Safety:** Shockproof rubber corner bumpers
- **Total dimensions:** 92 x 67 x 98h cm
- **Load capacity:** Approximately 200 kg distributed
