Showcase for cakes wooden 2-storey h16936

Showcase cakes wooden door 2 levels, with back doors and plexiglass.

Showcase brings cakes 2 floors with wooden MDF, shoulders and plexiglass doors and pull out shelf in tempered glass.

The MDF (medium density fibreboard, medium density fibreboard) is a derivative of wood: is the most famous and widespread family of fiber panels. The raw material used includes many types of wood, whether roundwood, scrap or nonwoven processing, preferably of Conifer. Starting from roundwood, it is usually the first of its bark, wood chips then, with the aid of chippers or frammentatrici, and then checked to eliminate traces and any extraneous pieces too large badly shredded. In some cases the roundwood is wood chips in the woods without being peeled, even if an excessive percentage of bark tends to worsen the characteristics of the panels. The refining to transform fragments of wood fiber, is performed by grinding to break existing links and form a paste of fibers, facilitated by immersion in water, the use of steam and heat or chemical treatments based on alkaline substances that weaken the bonds of lignin

The shoulders and the doors are made of plexiglass, a plastic material composed of polymers of methacrylate (MMA) methyl. Normally it is very transparent, most of the glass to the point that possesses characteristics of behavior similar to the optical fiber, for quality of transparency, and with the property of being more or less in different percentages, depending on its unbreakable "compound". This material can be completely recycled. Finishing can be gold or polished nickel finish. Standard available in Cherry color. A REQUEST: blue, yellow, brown, gray, red and white.

Specifications:

- Dimensions 35cm x 35cm x 40cm
- MDF wooden base
- Shoulders and plexiglass doors
- Pull-out shelf in tempered glass

- Floors 2
