

Single e-bike charging station h503_38

Single charging station for e-bikes in galvanized and black steel. Hoop model without box, with 230V IP67 socket and base plates.

The **single e-bike charging station** (model h503_38) is a hoop rack for electric bicycles specifically designed for the creation of functional parking points and the provision of energy for micro-mobility. Developed for installation in urban areas or private outdoor spaces, this infrastructure is aimed at public administrations, commercial space managers, corporate technical offices, and owners of hospitality facilities. The device solves the operational problem of **orderly parking of electric bicycles combined with the need for an immediate, accessible power point free from complex structural encumbrances**, thanks to an open hoop design made of square steel tubing. The charging point is equipped with a 230 V power supply with a high water insulation output socket and is configured for rigid and stable ground fixing via base plates pre-drilled for anchors.

Technical features

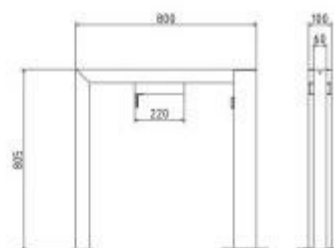

- **Product type:** e-bike hoop with charging station
- **Structural configuration:** single version made of square steel tubing
- **Presence of compartments:** without lockable box
- **Dimensions of structural tubes:** 100 x 100 mm and 60 x 60 mm square tube
- **Anti-corrosion treatment:** hot-dip galvanized steel
- **Surface finish:** black powder coating
- **System supply voltage:** 230 V
- **Features of the integrated output socket:** 230 V socket with protective cover and IP54 rating
- **Total electrical insulation grade of the socket:** IP67 230 V output socket
- **Structure width:** 800 mm
- **Total height of the structure:** 800 mm
- **Structural mass / Weight:** 15.7 kg
- **Overall dimensions:** 806 x 835 x 200 mm
- **Installation and anchoring method:** base plates for ground fixing via anchors
- **Suitable intended use:** installation in urban areas or private outdoor spaces
