

Single-hoop e-bike charging station h503_37

Single charging station for e-bikes in galvanized and black painted steel with 230V socket, lockable box and base plates.

The **single-hoop e-bike charging station** (model h503_37) is a single rack for electric bicycles specifically engineered for the creation of functional stopping points and the supply of energy for micro-mobility. Developed for installation in urban areas or private outdoor spaces, this infrastructure is aimed at public administrations, commercial space managers, corporate technical offices, and hospitality facility owners. The device solves the operational problem of **orderly parking of electric bicycles combined with the protection of personal chargers from theft and atmospheric agents during the power session**, thanks to a robust square steel tube structure equipped with a lockable charging box. The charging point is provided with a 230 V power supply with protected high-insulation sockets and configured for a rigid and stable fixing to the ground via base plates for bolts.

Technical features

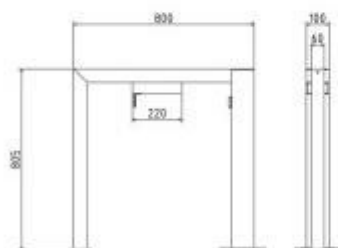

- **Product type:** single e-bike rack with charging station
- **Configuration:** single version made of square steel tube
- **Structural tubular dimensions:** 100 x 100 mm and 60 x 60 mm square tube
- **Anti-corrosion treatment and finish:** hot-dip galvanized steel and powder coating
- **Frame color:** black
- **System supply voltage:** 230 V
- **Internal socket protection grade:** IP54 socket equipped with protective cover
- **Overall electrical insulation grade:** IP67 electrical socket
- **Security system:** integrated lockable charging box
- **Structure width:** 800 mm
- **Total height of the product:** 800 mm
- **Structural mass / Weight:** 18 kg
- **Overall dimensions:** approximately 806 x 825 x 200 mm
- **Installation mode:** integrated base plates for fixing via bolts
- **Intended use:** installation in urban areas or private outdoor spaces
