

Soft emergency stretcher h690_21

Soft emergency stretcher in waterproof Tarpaulin (185x70 cm). Lightweight, foldable and stable for CPR, ideal for rescue and civil protection.

The **H690_21 soft emergency stretcher** is a technical device designed to optimize the **safe transport of patients** in critical scenarios and confined environments. The device solves the space issues typical of rigid systems, offering **rescuers, civil protection and medical staff** a tool that combines maximum structural stability with extreme portability.

Made of **waterproof TARPAULIN**, the stretcher guarantees high resistance to mechanical stress and tearing, while being easy to sanitize after every intervention, even in adverse weather conditions or contaminated outdoor environments.

Technical features

- **Material:** Waterproof TARPAULIN, tear-resistant and washable
- **Ultralight weight:** 1.7 kg
- **Load capacity:** up to 120 kg
- **Operational dimensions:** 0.1 x 70 x 185 cm
- **Dimensions in case:** transport bag 27 x 15 x 16 cm
- **Grip system:** reinforced handles distributed along the entire perimeter
- **Configuration:** foldable structure for volume reduction
- **Performance surface:** stable base optimized for cardiopulmonary resuscitation (CPR) maneuvers
- **Comfort:** integrated support pads for resting on uneven surfaces
- **Operational safety:** instructions for use printed directly on the surface
