

Soft inverse wavy foam staircase h999_11

Inverse wavy foam staircase 25kg/m³, non-slip base. Dimensions: W. 65 x D. 60 x h. 30 cm. For children from 18 months to 3 years.

The **soft inverse wavy foam staircase** is a psychomotor module specifically designed for children from **18 months to 3 years**, designed for educational environments such as **nurseries, toddler sections, and early childhood spaces**.

With a structure made of **high-density foam (25 kg/m³)** and a soft **antibacterial and bite-resistant** covering, it guarantees a safe and comfortable motor experience. The **non-slip base** ensures stability during use on any type of surface.

Its **inverse wavy** shape invites the child to **move, climb, descend, and step over**, stimulating the **development of balance, motor coordination, and body perception in space**. Thanks to the **limited height of 30 cm** and the soft profile, it can be used in total safety even during the first years of autonomous exploration.

The compact design (65 x 60 x 30 cm) allows for placement in **even small spaces**, while the **various colors available** make the play environment stimulating and visually attractive for children.

Compliant with **European safety regulations for children**, it is an essential tool for those who want to build **modular psychomotor circuits** and promote active learning through movement.

Complete your psychomotor circuit with the inverse wavy staircase! Request a quote for multiple supplies or customized solutions.

Technical characteristics:

- **Dimensions:** W. 65 x D. 60 x h. 30 cm
- **Internal material:** High-density foam 25 kg/m³
- **Covering:** Soft PVC, antibacterial, bite-resistant
- **Base:** Non-slip
- **Shape:** Inverse wavy staircase for motor activities
- **Colors:** Available in various colors
- **Recommended age:** From 18 months to 3 years
- **Use:** Indoor – nurseries, kindergartens, playrooms
- **Certifications:** Compliant with European safety regulations

User benefits:

- **Stimulates movement:** active in the first years of life.
- **Promotes:** coordination, balance, and body awareness.
- **Wavy shape:** which encourages overcoming small obstacles.
- **Covering:** safe, soft, and hygienic.
- **Adapts:** to small spaces and modular circuits.

FAQ:

1. **For which age group is the inverse wavy staircase intended?**

It is suitable for children from 18 months up to 3 years.

2. **Does it take up a lot of space?**

No, with compact dimensions: W. 65 x D. 60 x h. 30 cm, it is also suitable for small spaces.

3. **Is it stable during use?**

Yes, thanks to the non-slip base, the product remains firmly in place even on smooth surfaces.

4. **Is the material resistant to daily use?**

Yes, it is made of soft-effect PVC, bite-resistant and antibacterial, designed for high-frequency educational environments.

5. **Is the product lightweight to move?**

Yes, the high-density foam structure is both stable and lightweight, allowing educators to move it easily to create new motor circuits or adapt the space according to activities.

Mini buying guide:

When choosing psychomotor materials for children between 18 months and 3 years, it is essential to select elements that stimulate **autonomous movement** in a safe and guided context. The inverse wavy staircase is a specific product to help little ones face **level changes** and **surface variations**, improving **confidence in movements** and **dynamic balance**.

The **limited height** and **soft materials** allow for risk-free use, while the **non-slip structure** ensures that the module remains stable even during the most lively motor activity. The wavy design encourages children to **overcome small obstacles**, promoting **proprioception** and **active discovery**.

It is ideal for both free activities and organized motor circuits, in environments such as **nurseries, kindergartens, playrooms, and play centers**.

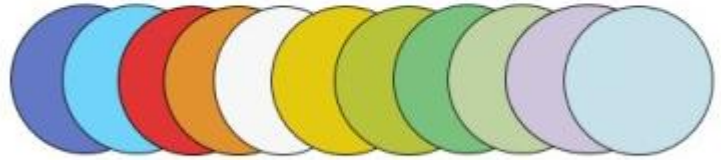

Choosing modules like this means offering children **rich and safe motor experiences**, in full compliance with European safety regulations.

Soft inverse wavy staircase, psychomotor module 18-36 months, kindergarten motor equipment, soft nursery staircase, toddler psychomotor circuit, foam wavy ramp psychomotricity, non-slip nursery staircase.
