

Soft wave-shaped educational block h999_07

Soft wave-shaped block in 25kg/m³ foam. Non-slip, stackable. Dimensions: W. 80 x D. 60 x h. 12 cm. For children aged 6-18 months.

The **soft psychomotor wave for nursery schools** is an educational module designed to **foster motor and sensory development** in children aged 6-18 months. Designed for psychomotor activities in educational environments such as **nurseries and kindergartens**, this block is ideal for creating safe and stimulating **play-motor paths**.

Made of **high-density foam (25 kg/m³)**, it guarantees an excellent combination of **softness and support**, while the **“skin-touch”, non-slip and antibacterial** coating ensures safety and comfort in direct contact with the skin of the little ones. The particular **wave shape** stimulates balance, motor coordination and bodily interaction during play.

Easily **stackable**, the soft wave is **versatile and modular**, allowing for customized configurations based on the activity. Thanks to its **compact shape** (W. 80 x D. 60 x h. 12 cm), it also adapts to **small spaces** and is easy to store after use.

Available in **different colors**, it complies with all **European safety regulations** for products intended for children. An indispensable tool for any educational environment that wishes to promote psychomotricity in a professional, safe and engaging way.

Add the soft wave to your psychomotor path! Contact us for customized supplies or to receive a personalized quote.

Technical specifications:

- **Unit dimensions:** W. 80 x D. 60 x h. 12 cm
- **Internal material:** Density 25 Kg/m³ foam
- **Covering:** Skin effect, antibacterial and bite-resistant
- **Base:** Non-slip
- **Shape:** Soft wave
- **Modularity:** Stackable and combinable with other elements
- **Colors:** Available in different colors
- **Recommended age:** From 6 to 18 months
- **Certifications:** Complies with European safety regulations

User benefits:

- **Stimulates skills:** psychomotor skills at an early stage.
- **Improves:** balance and coordination.
- **Soft:** to the touch and safe thanks to the skin-effect coating.
- **Non-slip:** ideal also for smooth floors.
- **Easily stackable:** for efficient space management.

FAQ:

1. **Is the product suitable for children under 6 months?**
No, it is indicated for children from 6 to 18 months.

2. **Are the dimensions suitable for small spaces?**

Yes, thanks to its compact size (80 x 60 x 12 cm) it is perfect for environments with limited space and can be easily stored after use.

3. **Is the module stable on smooth floors?**

Yes, the base is non-slip, which ensures grip and safety on any type of internal surface.

4. **Is the material safe for children who put everything in their mouths?**

Yes, the coating is bite-resistant, antibacterial and complies with European regulations.

5. **What activities can be performed with this block?**

The wave-shaped block is ideal for climbing, balance and rolling exercises. It can be used to stimulate body perception, independent movement and basic motor skills in children during the exploration phase.

Mini buying guide:

To choose the right psychomotor material in the 0-3 age group, it is important to focus on **safe, soft and certified** products. Elements like the soft wave combine functionality and play, stimulating basic motor skills in a protected context.

The **limited height**, the **soft surface**, the **antibacterial coating** and the **ergonomic design** are all determining factors for use with very young children. Furthermore, the **modularity and the possibility of stacking** the product allow for dynamic space management, which is fundamental in educational environments.

Products with **original shapes** like the wave facilitate body discovery, movement control and learning through direct experience. Daily use in nurseries and schools also requires a structure that is **easy to sanitize** and **durable over time**, two aspects fully satisfied by this item.

Choosing certified tools specifically designed for psychomotricity means **investing in active and safe learning**, creating a quality educational environment.

Soft wave psychomotor block, soft module for nursery, psychomotricity 6-18 months, soft furniture for kindergarten, educational wave mat, nursery psychomotor equipment, stackable block for young children.
