

Sound-absorbing panel with ceiling cable h738_193

Sound-absorbing panel in recycled polyester fiber (150x50 cm) for ceiling suspension with cables. Technical and customizable indoor solution.

The **H738_193** sound-absorbing panel is an acoustic module designed for suspended installation in indoor environments that require a significant improvement in auditory comfort. Made entirely of **recycled polyester fiber**, this element works on reducing reverb without interfering with vertical surfaces, making it ideal for contexts where walls are occupied by windows, furniture, or machinery. The fixing system via **cable attachment** guarantees an orderly installation and flexible management of the suspension height.

Technical features

- **Type:** ceiling-suspended sound-absorbing panel
- **Fixing system:** steel cable attachment
- **Material:** 100% recycled polyester fiber
- **Dimensions:** 150 x 50 cm
- **Thickness:** 1.8 cm
- **Available finishes:** grey, beige, anthracite
- **Use:** exclusively indoor
- **Properties:** printable on fabric

Optional:

- Graphic customization via single-sided direct UV printing on fabric (permanent graphic).
