

## Sound-absorbing partition panel h1033\_04

Suspended circular sound-absorbing panel with integrated 24W LED, Ø 90 cm. Technical solution in ultra-light material for acoustics and lighting.

The **H1033\_04 sound-absorbing panel** represents an advanced solution for the integrated management of **acoustic and luminous comfort** within professional environments. Designed as a suspended partition, the element acts directly on reducing reverberation and echo in contexts characterized by high noise pollution, such as **open spaces, meeting rooms, and coworking areas**. Its circular structure floats in space, acting as an acoustic corrector and at the same time as a primary or ambient light source.

The integration of a **24W LED** system allows for diffused and uniform lighting, eliminating the need to install separate lighting fixtures and optimizing the aesthetics of the ceiling. Thanks to the low weight of only **2 kg**, installation is quick and safe even on non-load-bearing structures or lightweight false ceilings.

## Technical features

- **Panel diameter:** 90 cm
- **Active surface:** 0.63 m<sup>2</sup>
- **Sound-absorbing volume:** 0.96 m<sup>3</sup>
- **Lighting system:** Integrated 24W LED
- **Power supply:** LED driver included in the kit
- **Total weight:** 2 kg
- **Installation:** Ceiling suspension kit included
- **Variants:** Available in different colors for chromatic integration
