

Sound-absorbing partition with 4 panels h1033_23

Modular sound-absorbing partition with 4 recycled polyester panels, W 140 x H 179 cm. Certified solution for acoustic privacy in offices.

The **H1033_23 sound-absorbing partition** is a professional modular system designed for acoustic management and dynamic compartmentalization of workspaces. Thanks to the **four horizontal panel** configuration, this solution allows for screening sound reverberation and defining reserved areas within open-space offices, meeting rooms, and operational departments without requiring structural interventions or masonry work.

The structure stands out for the use of **thermoformed recycled polyester fiber** coupled with an internal insert featuring **fire-retardant honeycomb** technology, which provides rigidity and maximum absorption performance. The bi-elastic stretch fabric covering and laser-finished edges ensure an impeccable aesthetic result, suitable for contemporary and professional architectural contexts.

Technical characteristics

- **Configuration:** 4 modular mounting double-sided horizontal panels
- **Single panel dimensions:** W. 140 x H. 40 cm
- **Total height:** approximately 179.4 cm
- **Absorbent material:** Thermoformed recycled polyester fiber
- **Internal core:** Patented fire-retardant honeycomb insert
- **Fire reaction certification:** UNI EN 13501-1:2009 – Class B-s2,d0 (Class 1 Italy)
- **Finishes:** Laser-cut edges, bi-elastic stretch fabric covering
- **Structural support:** 80/10 thickness metal base without wheels, color Grey RAL 7035
- **Fixing system:** 50/10 thickness support tuning fork with screw housing for spacers
