Anti-corrosion treatments and finish:

Pre-treatment:

before being painted, the product is pre-treated by spray washing with special degreasing liquids. After washing, the product to be painted is dried for 15 minutes in a drying oven.

Anti-corrosion treatment:

in order to provide suitable protection against atmospheric agents, the product is subjected to a first painting cycle using a thermosetting powder anti-corrosion primer based on epoxy resin with special pigments.

First baking:

the product treated with anti-corrosion primer is subjected to a first oven baking for 15 minutes at a temperature of 180°. In this phase, the anti-corrosive polymerizes, forming a coating thickness of approximately 60 microns.

Painting:

the product is subjected to a final painting cycle with thermosetting powder based on polyester resins in "gunmetal" color. Painting is performed with electrostatic spray equipment, which allows the powder to settle uniformly on the pieces, forming a minimum thickness of 60 microns.

Final baking:

the painted product is subjected to a final oven baking for 20 minutes at a temperature of 160°.

Fixing:

By extending the support post into the ground
