

Spill containment pallet for 4 vertical drums h877_03

Spill containment pallet for storage of 4 vertical or 2 horizontal drums. Dimensions: 1400x1400x h. 350 mm. In painted carbon steel 25/10 thickness.

In the industrial sector, the transport and storage of liquids are fundamental operations, to be carried out with safe and efficient equipment. In particular, **spill containment pallets** represent the ideal solution for transporting and storing drums containing liquids and chemical or hazardous substances, to avoid, in case of a spill, groundwater pollution. This model is made of **painted carbon steel** with a **thickness of 25/10**, leak-proof welded and including a **removable galvanized support grid**. The structure is **designed for the storage of 4 vertical drums or 2 horizontal drums**.

Technical features:

- Dimensions: 1400x1400x h. 350 mm
- For storage of 4 vertical drums or 2 horizontal drums
- Material: painted carbon steel 25/10 thickness
- With removable galvanized support grid
