

## Spill containment pallet h977\_04

Modular polyethylene spill collection tray, 160L (132x132x15.5 cm). Acid-resistant monobloc structure, ideal for drum storage platforms.

The **spill containment pallet h977\_04** represents an advanced modular solution for setting up **safe storage** areas for drums, jerricans, and containers of hazardous substances. Designed with a low-profile floor design, it allows warehouses and production areas to be transformed into functional work environments, minimizing loading height and facilitating daily operations.

The component is molded in a **100% virgin polyethylene monobloc** stabilized against UV rays, a construction technology that eliminates welds and ensures the total **absence of leaks**. The excellent chemical resistance makes it compatible with a wide range of aggressive agents, including acids, bases, and oils, typical of the chemical, pharmaceutical, and engineering sectors.

The system stands out for its **modularity**: through the use of bulkhead fittings, it is possible to connect multiple units together to create custom containment platforms, adaptable to the specific layout of the site. The structural load capacity of **600 kg** guarantees the stability necessary for heavy industrial loads.

## Technical features

- **Material:** 100% UV-stabilized virgin polyethylene
- **Containment capacity:** 160 liters
- **Dimensions:** L 132 × D 132 × H 15.5 cm
- **Weight:** 24 kg
- **Maximum load:** 600 kg (uniformly distributed)
- **Color:** Green
- **Modularity:** Pre-arranged for connection via bulkhead fittings
- **Chemical resistance:** Excellent against acids, bases, and oils
- **Handling:** Designed for pallet truck or forklift (exclusively empty)
- **Stackability:** Stackable from 5 to 8 pieces for logistics optimization
