

Spill tray with grid h977_01

Spill tray in virgin polyethylene for 2 x 200L drums. Dimensions 130x90x33 cm, capacity 210L. Durable and stackable monobloc structure.

The **spill tray with grid h977_01** represents an indispensable technical solution for the safe management of hazardous substances in compliance with environmental protection regulations. Designed to house **2 x 200-liter drums**, this unit prevents soil contamination in the event of accidental spills of polluting liquids. The construction in **100% UV-stabilized virgin polyethylene**, made through monobloc rotational molding, guarantees a total absence of joints, eliminating any risk of structural leakage.

Technical specifications

- **Material:** 100% high-resistance UV-stabilized virgin polyethylene
- **Sump capacity:** 210 liters
- **Dimensions:** L 130 × W 90 × H 33 cm
- **Loading capacity:** 2 x 200-liter drums (not included)
- **Maximum load:** 600 kg (uniformly distributed)
- **Tare weight:** 31.4 kg
- **Color:** Industrial green
- **Chemical resistance:** High compatibility with acids, bases, and oils
- **Handling:** Designed for pallet truck or forklift (exclusively when empty)
- **Logistics:** Stackable structure up to 5-6 pieces for space optimization
- **Maintenance:** Removable grid for direct access to the containment sump
