

Spine board stretcher h648_09

Spine board for patient transport. Material: plastic. Load capacity: 160 kg.

Spine board for first aid, ideal for emergency operations requiring the transport of patients with possible spinal injuries or for water rescues. Made of resistant **plastic material** and characterized by **extreme lightness**, making it both robust and easy to transport. It can also be used for X-rays as the material is **X-ray translucent**. Equipped with **side handles** for easy transport and supplied complete with **safety straps** for patient immobilization.

Technical features:

- Dimensions: L184 x W41 x H5 cm
- Material: plastic
- Load capacity: 160 kg
- Weight: approx. 7.5 kg
- X-ray translucent
- With side handles
- Safety straps included
