

Square road manhole cover h638_113

Ductile iron manhole cover. Dimensions: 40 x 40 cm. Square frame and cover. Loading class: C250.

The **road manhole cover h638_113** is a compact and robust closing device, designed specifically for installation in areas with heavy vehicle traffic at low speeds, such as road shoulders, parking lots, and rest areas. Made entirely of **ductile iron**, an excellent material for mechanical resistance and longevity, the manhole cover features a square frame and cover. The structure is equipped with a practical **automatic closing system**, which can be opened using a common lever, facilitating inspection operations. The surface of the cover is finished with anti-slip reliefs to ensure road safety and promote water runoff, also including a smooth space for potential customization with logos or identification text of the managing authority.

Technical characteristics

- **Material:** High-resistance ductile iron
- **Loading class:** C250 (Breaking load 25 tons)
- **External dimensions:** 40 x 40 cm
- **Height:** 35 mm
- **Clear opening:** 30 x 30 cm (useful passage)
- **Weight:** 11 kg
- **Geometry:** Square frame and cover
- **Functionality:** Automatic and airtight closure
- **Safety:** Surface with anti-slip reliefs
