

Stainless steel boot washer with 3 irrigated brushes h767_03

Manual stainless steel boot washer, 400x400 mm, with 3 irrigated brushes and by-pass valve. Ideal for corrosive environments and high-hygiene sectors.

The **non-electric stainless steel boot washer** is a solution designed to ensure high hygienic standards in professional environments where power supply is not available or desirable. The structure is designed to withstand **highly corrosive environments** and intense work cycles, offering an efficient and durable mechanical cleaning station. Water management is handled through a direct connection to the water network, ensuring constant and deep cleaning of technical footwear.

Technical features

- **Material:** Structure entirely made of stainless steel
- **Dimensions:** W. 400 x D. 400 x h. from 500 to 870 mm (variable height based on handle adjustment)
- **Weight:** 10 kg
- **Brushing system:** 3 irrigated brushes (1 central and 2 lateral)
- **Water control:** Integrated by-pass valve for excluding the side brushes and boosting the central jet
- **Power supply:** Water-powered, requires no electrical connection
- **Maintenance:** Reduced, thanks to the absence of motorized components
- **Resistance:** Robust structure specifically for industrial environments
