

Stainless steel footstool h624_13

Surgical stainless steel footstool 60x35 cm, 200 kg capacity, with removable non-slip surface and antistatic foot for safety in the room.

The **stainless steel footstool h624_13** is a professional device designed for intensive use in operating rooms and sterile environments. The tubular structure ensures high mechanical resistance, while the design with rounded and smoothed edges strictly complies with safety regulations for accident prevention and the facilitation of sanitization processes. The upper tread, characterized by a **knurled non-slip surface**, is easily removable to allow for deep and thorough cleaning of the component.

Technical features

- **Material:** High-resistance stainless steel
- **Configuration:** Single step with tubular structure
- **Load capacity:** 200 kg
- **Safety:** Knurled non-slip and removable treading surface
- **Dimensions:** W. 60 x D. 35 x h. 22 cm
- **Stability:** 3 non-slip rubber suction cup leveling feet and 1 antistatic foot
- **Certifications:** UNI EN ISO 9001, UNI EN ISO 45001, UNI EN ISO 14001, UNI CEI EN ISO 13485 (Medical Devices), IATF 16949
