

Stainless steel IV pole h582_97

Professional stainless steel infusion pole, adjustable 135-240 cm, with a 5-star base and 4 hooks. Ideal for the safe management of intravenous bags.

The **professional infusion pole** represents an indispensable support for the administration of intravenous therapies in clinical and care settings. Designed to ensure maximum stability and resistance, this structure facilitates the work of healthcare personnel in hospitals, specialized clinics, and long-term care facilities such as nursing homes. The use of **stainless steel** ensures high hygienic standards, facilitating periodic sanitization procedures and preventing corrosion caused by intensive use or contact with chemical agents.

Technical characteristics

- **Material:** high-resistance stainless steel
- **Adjustable height:** from 135 to 240 cm with a secure locking system
- **Base:** 5-star configuration with swivel wheels for smooth mobility
- **Supports:** 4 stainless steel hooks for the simultaneous anchoring of multiple bags
- **Tube dimensions:** differentiated diameter 25/21 mm to ensure telescopic stability
- **Load capacity:** maximum load per single hook 5 kg; total overall capacity 20 kg
