

Stair and evacuation chair with 2 wheels h687_14

Evacuation chair with two rear wheels. Load capacity of approximately 150 kg.

Designed to allow **the evacuation and transport of the patient in narrow spaces**, this evacuation chair fits on all types of ambulances. Built in **chrome-plated steel**, easy to sanitize. The geometry, the **generously sized wheels**, and the **wide-radius handles** integrated into the frame structure give the chair **exceptional maneuverability**. The fabric made of SPEN-TEX coated vinyl, easily washable, has adjustable tension and can be easily removed for **sanitization or replacement operations**. They fold and open with a single movement. Thanks to the intuitiveness of the operations, the essential postural conditions, the reduced weight and size, and the low cost, they are also used to integrate evacuation systems on the floors of public and private buildings, in railway stations, airports, and ports. Offers high levels of safety and durability. The compactness, the ease of use, the rapidity of opening and closing movements, the **solidity of the welded frame**, the **secure posture of the patient** and the low cost result in dynamism, agility, and immediate response capacity to every eventuality. The **stair and evacuation chair** is supplied with **three 50 mm polypropylene belts**.

Technical features:

- chrome-plated steel structure
- PVC fabric
- Folding
- 2 rear wheels
- 3 polypropylene belts
- Dimensions: W.840 ± 10 mm x D.410 ± 10 mm
- Open height: 940 ± 10 mm
- Folded height: 770 ± 10 mm
- Folded thickness: 235 ± 10 mm
- Rear wheels ø 200 mm
- Materials: Steel/Al/PVC
- Weight: 10 kg ± 0.3
- Load capacity: 150 kg
