

Steel and sheet metal drum trolley h62_12

Painted steel drum trolley, 83x50 cm sheet metal platform with rim, 200 kg capacity. Ideal for handling drums and small objects. The **h62_12 drum trolley** is professional equipment designed for the optimization of internal logistics in warehouses, workshops, and DIY centers. The **painted tubular steel load-bearing structure**, combined with a **sheet metal supporting surface**, gives the vehicle high mechanical resistance and optimal torsional stability for intensive use.

Thanks to the functional design that integrates a **sheet metal containment rim**, the trolley is not limited to the transport of drums and boards, but allows the safe movement of small objects and small parts, avoiding accidental falls during transit. The movement system is entrusted to **four high-quality rubber wheels** of 100 mm: two fixed and two swivel equipped with **brakes** and **thread guards**, to ensure millimetric maneuverability and constant operational safety.

Technical characteristics

- **Structure material:** high-resistance painted tubular steel
- **Supporting surface:** 83 x 50 cm sheet metal with perimeteric containment rim
- **Wheel system:** 2 swivel wheels with brake and 2 fixed wheels, 100 mm diameter, in rubber with thread guard protection
- **Total dimensions:** 109 x 50 x h. 99 cm
- **Load capacity:** maximum capacity of 200 kg
