

Storage sump in blue color RAL 5010 h286_56

Welded steel storage sump H286_56, 200x80x40 cm. For 3 drums of 200L, with removable tubular supports for simplified leak recovery.

The **industrial storage sump h286_56** is a technical solution designed to ensure maximum safety in the containment of polluting liquids within production and logistics sites. The structure responds to the critical need to prevent the dispersion of hazardous substances into the soil, while simplifying drum management and storage procedures. Made of **high-thickness steel sheet** and watertight welded, it ensures superior mechanical resistance and a long operating life in heavy-duty professional contexts.

Technical features

- **Material:** robust steel sheet with certified watertight welding
- **Sump capacity:** 320 liters
- **External dimensions:** L 200 x D 80 x H 30 + 10 cm
- **Storage configuration:** designed for three 200-liter drums in a vertical position
- **Handling:** palletized monobloc structure for use with forklifts or pallet trucks
- **Support system:** removable painted tubular supports for the optimization of leak recovery
- **Surface finish:** thermosetting powder coating in Blue RAL 5010, resistant to chemical agents and wear
